

NATURE'S BEST ORGANIC FEEDS
The way nature intended.

Our organic feeds are made with certified organic ingredients. This means that the crops that produce our grains are grown under a program in which a certifying agency certifies to the USDA that the crops are grown in a way that is considered organic according to national and international guidelines. In the case of our feed mill, Quality Assurance International inspects us, but we buy grains inspected and certified by QAI, NOFA New York, PCO, and other regional certification agencies. The inspections follow the grain we use right back to the field in which it was grown.

The rules that govern the growing of grain are designed to enhance the life of the soil. Healthy soil naturally produces healthy crops. Many consider the soil in non-organic situations to be biologically "dead." Many corn fields are grown with corn year after year, a situation that depletes the organic matter that is the living part of the soil. Insects, plant diseases and weeds build up, causing these fields to be sprayed with insecticides, herbicides, and fungicides, just so the crop will grow.

Made in America

A STANDARD OF EXCELLENCE

At Nature's Best we practice a high level of quality control, inspecting and testing incoming grain, rejecting all grain that does not meet our high standards. We do routine testing to ensure that our mixing process provides a uniform product. A final inspection as your feed is being bagged ensures that you receive only the best product.

Nature's Best Organic Feed is part of Kreamer Feed, Inc., a family business started by George Robinson in 1947 and now run by his children. Our family's reputation backs every bag of feed that we sell so your satisfaction is guaranteed.

NATURE'S BEST ORGANIC FEEDS
for your Broilers

Using organic grain is good for the environment and great for your broilers.

ORGANIC ADVANTAGES

There are many reasons why Nature's Best Organic Feeds are better for your broilers. For example, in organic farming the use of sprays is limited to natural remedies like the natural bacteria Bt, or vinegar as an herbicide. Crop rotations are a must and are designed to enhance and elevate the organic matter in the soil. Getting more organic matter, and keeping it alive by restricting the types of lime, fertilizer, and synthetic chemicals, is the key to healthy living soil.

Some say there is no difference, but recent tests have shown the advantages of organics. When you compare organic produce or organic corn to non-organic, they may look the same but there are major differences. These differences are what makes organic grain better for your broilers.

Tests of many samples have proven that organic grains are less likely to contain pesticide residue. In those samples that do, the levels are much lower than in non-organic. Pesticides are avoided because organics are not sprayed, non-organics are. When organics show a residue it is because of soil residue or non-organic spray drift. Yes, almost all non-organic grain contains some level of pesticide. It just happens to be

at levels that our government says are okay for adults. Most of these "okay" levels of pesticides have never been tested on children or broilers.

*Nature's Best organic feed is
100% satisfaction guaranteed.*

NUTRITIONAL BALANCE

There are also nutritional differences in the grains. Conventional grain sometimes has higher crude protein levels than organic. But this crude protein contains non-protein nitrogen that cannot be used by you or your broilers. When amino acids, the building blocks of protein, are measured, organic grains have higher levels and more complete amino acid blends than the non-organic. Other nutritional differences include:

- Antioxidants in organic corn have tested ten times higher than in non-organic corn.
- Higher natural sugar levels in organic crops create healthier soils, which results in better palatability and more energy per pound.

Nature's Best organic broiler feeds are fully fortified with all the nutrients a broiler needs from hatching to market. M0510 Broiler Starter is designed to get your flock off to a good start by promoting good livability, solid legs, and early feathering. M0523 Broiler Grower/Finisher will build the frame and muscle (meat). It is fully fortified for birds living on a pasture or in housing systems.

The small producer or backyard broiler program consists of just two feeds. These include M0510 Nature's Best Organic Broiler Starter Mash and M0523 Nature's Best Organic Broiler Grower/Finisher Crumbles. Both are available in 50-pound bags or in one-ton totes.

FEEDING DIRECTIONS

Nature's Best broiler feeds should be made available free choice to the birds at all times in clean feeders. Small amounts of granite grower grit may be fed on top of the feed. Clean water should be available at all times. Scratch grains may be fed as a feed stretcher to older birds; however do not feed more than 10% of daily intake, as it will reduce the protein level of the total ration. Protein is necessary to produce lean muscling.

PROGRAMS

STANDARD BROILER PROGRAM

Feed M0510 Nature's Best Organic Broiler Starter from hatch to 21 days. Each bird will consume about three pounds of feed in the three-week period. At day 22, switch birds to M0523 Nature's Best Organic Broiler Grower/Finisher Crumbles. Grower Finisher crumbles should be fed as the sole ration from day 22 to market. The amount necessary depends on the breed of chicken, weather, and weight at marketing. The birds will consume approximately two to two and one half pounds of feed per pound of gain.

BROILER CONCENTRATE PROGRAM

For broiler producers with their own corn, we offer the fully fortified Broiler Concentrate (M0599). It is designed to be mixed with ground corn to make a 19% crude protein feed for growing broilers that are well started. After feeding M0510 Broiler Starter for three weeks, switch to broiler concentrate feed. This may be fed from day 22 to market.

THE ORGANIC DIFFERENCE

Our organic formulas are fixed formulas. They do not change even when ingredient pricing changes. Your broilers get the same flavor and nutrition each and every time you purchase. Ingredients are not listed in order of ingredient amounts in the formula.

Ingredients in Broiler Feeds are:

- Organic Corn
- Organic Roasted Soybeans
- Organic Wheat & Wheat Midds
- Organic Whole Barley
- Limestone
- Salt (*mined with no additives*)
- Probiotics – OMRI approved
- Diatomaceous Earth
- Vitamins & Trace Minerals

All non-grain additives are listed as allowable on the national list.
