

NATURE'S BEST ORGANIC FEEDS
The way nature intended.

Our organic feeds are made with certified organic ingredients. This means that the crops that produce our grains are grown under a program in which a certifying agency certifies to the USDA that the crops are grown in a way that is considered organic according to national and international guidelines. In the case of our feed mill, Quality Assurance International inspects us, but we buy grains inspected and certified by QAI, NOFA New York, PCO, and other regional certification agencies. The inspections follow the grain we use right back to the field in which it was grown.

The rules that govern the growing of grain are designed to enhance the life of the soil. Healthy soil naturally produces healthy crops. Many consider the soil in non-organic situations to be biologically "dead." Many corn fields are grown with corn year after year, a situation that depletes the organic matter that is the living part of the soil. Insects, plant diseases and weeds build up, causing these fields to be sprayed with insecticides, herbicides, and fungicides, just so the crop will grow.

Made in America

A STANDARD OF EXCELLENCE

At Nature's Best we practice a high level of quality control, inspecting and testing incoming grain, rejecting all grain that does not meet our high standards. We do routine testing to ensure that our mixing process provides a uniform product. A final inspection as your feed is being bagged ensures that you receive only the best product.

Nature's Best Organic Feed is part of Kreamer Feed, Inc., a family business started by George Robinson in 1947 and now run by his children. Our family's reputation backs every bag of feed that we sell so your satisfaction is guaranteed.

NATURE'S BEST ORGANIC FEEDS
for your Layers

Using organic grain is good for the environment and great for your layers.

ORGANIC ADVANTAGES

There are many reasons why Nature's Best Organic Feeds are better for your layers. For example, in organic farming the use of sprays is limited to natural remedies like the natural bacteria Bt, or vinegar as an herbicide. Crop rotations are a must and are designed to enhance and elevate the organic matter in the soil. Getting more organic matter, and keeping it alive by restricting the types of lime, fertilizer, and synthetic chemicals, is the key to healthy living soil.

Some say there is no difference, but recent tests have shown the advantages of organics. When you compare organic produce or organic corn to non-organic, they may look the same but there are major differences. These differences are what makes organic grain better for your layers.

Tests of many samples have proven that organic grains are less likely to contain pesticide residue. In those samples that do, the levels are much lower than in non-organic. Pesticides are avoided, because organics are not sprayed, and non-organics are. When organics show a residue it is because of soil residue or non-organic spray drift. Yes, almost

all non-organic grain contains some level of pesticide. It just happens to be at levels that our government says are okay for adults. Most of these "okay" levels of pesticides have never been tested on children, or layers.

NUTRITIONAL

Nature's Best organic feed is 100% satisfaction guaranteed.

BALANCE

There are also nutritional differences in the grains. Conventional grain sometimes has higher crude protein levels than organic. But this crude protein contains non-protein nitrogen that cannot be used by you or your layers. When amino acids, the building blocks of protein, are measured, organic grains have higher levels and more complete amino acid blends than the non-organic. Other nutritional differences include:

- Antioxidants in organic corn have tested ten times higher than in non-organic corn.
- Higher natural sugar levels in organic crops create healthier soils, resulting in better palatability and more energy per pound.

Nature's Best organic layer feeds are fully fortified to keep birds healthy and productive. Our standard layer feeds, M0654 Organic Egg Layer Mash and M0650 Organic Egg Layer Pellets, are carefully balanced to provide high energy with a good balance of protein, amino acids, vitamins, and minerals. Developed by an internationally known nutritionist with 30 years of experience in his field, our organic layer feeds provide a professional level of quality and performance. They will work with all breeds of laying hens including heritage breeds or dual-purpose breeds. They work well with pastured or housed birds and are equally as effective in both summer and winter. The quality of our layer feeds will keep birds laying well into their second and third year. Our customers say that Nature's Best Organic Egg Layer is the most economical. Our layer feed will help laying hens peak at 94% production in year one and 90% in year two.

This will give you the most eggs per pound of feed. A cheaper organic layer feed requires more feed and generates fewer eggs.

THE ORGANIC DIFFERENCE

Our organic formulas are fixed formulas. They do not change even when ingredient pricing changes. Your layers get the same flavor and nutrition each and every time you purchase. Ingredients are not listed in order of ingredient amounts in the formula.

Ingredients in Layer Feeds are:

- Organic Corn
- Organic Roasted Soybeans
- Organic Wheat
- Organic Whole Oats
- Organic Wheat Midds
- Diatomaceous Earth
- Limestone
- Probiotics – OMRI approved
- Salt (*mined with no additives*)
- Trace Minerals
- Vitamins

Also available for your hens:

- Nature's Best Organic Scratch Feed
- Organic Whole Barley
- Whole Flax Seeds
- Oyster Shells
- Granite Grit

All non-grain additives are listed as allowable on the national list.

PULLET PROGRAM

When starting your own pullets, use M0610 Nature's Best Organic Pullet Starter from hatching to three weeks. From 22 days until the first eggs are seen (18 to 21 weeks), use M0625 Nature's Best Organic Pullet Grower/Developer. Once laying begins, switch to a Nature's Best Organic Egg Layer. For breeding flocks use M0811 Nature's Best Organic Poultry Breeder in place of your regular layer feeds.
