

NATURE'S BEST ORGANIC FEEDS
The way nature intended.

Our organic feeds are made with certified organic ingredients. This means that the crops that produce our grains are grown under a program in which a certifying agency certifies to the USDA that the crops are grown in a way that is considered organic according to national and international guidelines. In the case of our feed mill, Quality Assurance International inspects us, but we buy grains inspected and certified by QAI, NOFA New York, PCO, and other regional certification agencies. The inspections follow the grain we use right back to the field in which it was grown.

The rules that govern the growing of grain are designed to enhance the life of the soil. Healthy soil naturally produces healthy crops. Many consider the soil in non-organic situations to be biologically "dead." Many corn fields are grown with corn year after year, a situation that depletes the organic matter that is the living part of the soil. Insects, plant diseases and weeds build up, causing these fields to be sprayed with insecticides, herbicides, and fungicides, just so the crop will grow.

Made in America

A STANDARD OF EXCELLENCE

At Nature's Best we practice a high level of quality control, inspecting and testing incoming grain, rejecting all grain that does not meet our high standards. We do routine testing to ensure that our mixing process provides a uniform product. A final inspection as your feed is being bagged ensures that you receive only the best product.

Nature's Best Organic Feed is part of Kreamer Feed, Inc., a family business started by George Robinson in 1947 and now run by his children. Our family's reputation backs every bag of feed that we sell so your satisfaction is guaranteed.

NATURE'S BEST ORGANIC FEEDS
for your Sheep & Goat

Using organic grain is good for the environment and great for your sheep and goat.

ORGANIC ADVANTAGES

There are many reasons why Nature's Best Organic Feeds are better for your sheep and goat. For example, in organic farming the use of sprays is limited to natural remedies like the natural bacteria Bt, or vinegar as an herbicide. Crop rotations are a must and are designed to enhance and elevate the organic matter in the soil. Getting more organic matter, and keeping it alive by restricting the types of lime, fertilizer, and synthetic chemicals, is the key to healthy living soil.

Some say there is no difference, but recent tests have shown the advantages of organics. When you compare organic produce or organic corn to non-organic, they may look the same but there are major differences. These differences are what makes organic grain better for your sheep and goat.

Tests of many samples have proven that organic grains are less likely to contain pesticide residue. In those samples that do, the levels are much lower than in non-organic. Pesticides are avoided because organics are not sprayed, non-organics are. When organics show a residue it is because of soil residue or non-organic spray drift. Yes, almost all non-organic grain contains some level of pesticide. It

just happens to be at levels that our government says are okay for adults. Most of these "okay" levels of pesticides have never been tested on children or sheep and goat.

Nature's Best organic feed is 100% satisfaction guaranteed.

NUTRITIONAL BALANCE

There are also nutritional differences in the grains. Conventional grain sometimes has higher crude protein levels than organic. But this crude protein contains non-protein nitrogen that cannot be used by you or your sheep and goat. When amino acids, the building blocks of protein, are measured, organic grains have higher levels and more complete amino acid blends than the non-organic. Other nutritional differences include:

- Antioxidants in organic corn have tested ten times higher than in non-organic corn.
- Higher natural sugar levels in organic crops create healthier soils, which results in better palatability and more energy per pound.

SHEEP FEED & FREE CHOICE MINERALS

Nature's Best Organic Sheep Feed is a 16% crude protein formula designed for all sheep. Lambs and ewes will both respond to this palatable coarse blend of organic grains. Organic ingredients include: cracked corn, whole barley, whole oats and whole roasted soybeans. These organic coarse grains are blended with organic soybean meal, organic molasses, limestone, dicalcium phosphate, organic soybean oil, salt, and diatomaceous earth. The finishing touch in this blend is Nature's Best Sheep Mineral. It is also designed to supply the necessary minerals, vitamins, and trace mineral needs when fed free choice to grazing sheep. It is specially

formulated for organic use. *Nature's Best Sheep mineral contains no added copper.*

GOAT FEED

Nature's Best organic goat feed is a coarse textured blend of organic grains. Organic ingredients include: cracked corn, whole oats, whole barley, whole roasted soybeans, organic molasses, organic soybean oil, diatomaceous earth, and all of the necessary vitamins, minerals and trace minerals needed for good goat health. Nature's Best organic goat feed is an excellent choice for the small goat herd or the large commercial goat dairy. It also works well as a goat feed for meat goats or fiber production.

Do not feed this goat feed to sheep. It contains added copper, which can be toxic to sheep.

Nature's Best organic sheep and goat feeds are available in 50-pound bags or one-ton totes. The Nature's Best sheep mineral is available in 50-pound bags.

THE ORGANIC DIFFERENCE

Our organic formulas are fixed formulas. They do not change even when ingredient pricing changes. Your turkeys get the same flavor and nutrition each and every time you purchase. Ingredients are not listed in order of ingredient amounts in the formula.
