

NATURE'S BEST ORGANIC FEEDS  
*The way nature intended.*

*Made in America*

Our organic feeds are made with certified organic ingredients. This means that the crops that produce our grains are grown under a program in which a certifying agency certifies to the USDA that the crops are grown in a way that is considered organic according to national and international guidelines. In the case of our feed mill, Quality Assurance International inspects us, but we buy grains inspected and certified by QAI, NOFA New York, PCO, and other regional certification agencies. The inspections follow the grain we use right back to the field in which it was grown.

The rules that govern the growing of grain are designed to enhance the life of the soil. Healthy soil naturally produces healthy crops. Many consider the soil in non-organic situations to be biologically "dead." Many corn fields are grown with corn year after year, a situation that depletes the organic matter that is the living part of the soil. Insects, plant diseases and weeds build up, causing these fields to be sprayed with insecticides, herbicides, and fungicides, just so the crop will grow.

#### A STANDARD OF EXCELLENCE

At Nature's Best we practice a high level of quality control, inspecting and testing incoming grain, rejecting all grain that does not meet our high standards. We do routine testing to ensure that our mixing process provides a uniform product. A final inspection as your feed is being bagged ensures that you receive only the best product.

Nature's Best Organic Feed is part of Kreamer Feed, Inc., a family business started by George Robinson in 1947 and now run by his children. Our family's reputation backs every bag of feed that we sell so your satisfaction is guaranteed.

NATURE'S BEST ORGANIC FEEDS  
*for your Turkeys*

# Using organic grain is good for the environment and great for your turkey.

## ORGANIC ADVANTAGES

There are many reasons why Nature's Best Organic Feeds are better for your turkey. For example, in organic farming the use of sprays is limited to natural remedies like the natural bacteria Bt, or vinegar as an herbicide. Crop rotations are a must and are designed to enhance and elevate the organic matter in the soil. Getting more organic matter, and keeping it alive by restricting the types of lime, fertilizer, and synthetic chemicals, is the key to healthy living soil.

Some say there is no difference, but recent tests have shown the advantages of organics. When you compare organic produce or organic corn to non-organic, they may look the same but there are major differences. These differences are what makes organic grain better for your turkey.

Tests of many samples have proven that organic grains are less likely to contain pesticide residue. In those samples that do, the levels are much lower than in non-organic. Pesticides are avoided because organics are not sprayed, non-organics are. When organics show a residue it is because of soil residue or non-organic spray drift. Yes, almost all non-organic grain contains some level of pesticide. It just happens to be at levels that our government says are okay for adults. Most of these "okay" levels of pesticides have never been tested on children or turkeys.

## NUTRITIONAL

*Nature's Best organic feed is 100% satisfaction guaranteed.*

## BALANCE

There are also nutritional differences in the grains. Conventional grain sometimes has higher crude protein levels than organic. But this crude protein contains non-protein nitrogen that cannot be used by you or your turkey. When amino acids, the building blocks of protein, are measured, organic grains have higher levels and more complete amino acid blends than the non-organic. Other nutritional differences include:

- Antioxidants in organic corn have tested ten times higher than in non-organic corn.
- Higher natural sugar levels in organic crops create healthier soils, which results in better palatability and more energy per pound.

Nature's Best has a program for everyone from the backyard grower or small producer, to the large producer with thousands of birds.

## PROGRAMS

### SMALL GROWER PROGRAM

The small producer or backyard turkey program for meatbirds consists of just two feeds. M0802 Nature's Best Organic Turkey Starter Mash and M0807 Nature's Best Organic Turkey Grower Pellets are available in 50-pound bags or in one-ton totes. This program is efficient, simple, and produces healthy, meaty birds with less fat.

### LARGE PRODUCER PROGRAM

Larger producers can purchase our full line of turkey feeds in bulk or one-ton bulk totes. The larger grower will achieve a slight feed conversion benefit with the six-phase program. This will save your farm money when raising a larger number of birds. Our bulk line includes:

- M0801 Turkey Pre-Starter
- M0802 Turkey Starter
- M0803 Turkey Grower #1
- M0804 Turkey Grower #2
- M0805 Turkey Finisher #1
- M0806 Turkey Finisher #2

*These feeds are available in meal form. Pellets or crumbles are available with a three-ton minimum order.*

### TURKEY CONCENTRATE PROGRAM

For turkey producers with their own corn, we offer the fully fortified Turkey Grower Concentrate (M0899). The concentrate program is similar to the small grower program.

### HERITAGE & BREEDER PROGRAM

This program will slow growth and prevent fat deposits in the breeders. Keep the birds on M0811 Turkey Breeder feed during the period of hatching egg production.

## THE ORGANIC DIFFERENCE

Our organic formulas are fixed formulas. They do not change even when ingredient pricing changes. Your turkeys get the same flavor and nutrition each and every time you purchase. Ingredients are not listed in order of ingredient amounts in the formula.

### Ingredients in Turkey Feeds are:

- Organic Corn
- Organic Roasted Soybeans
- Organic Expeller Process Soybean Meal
- Organic Wheat Midds
- Minerals
- Vitamins
- Trace Minerals
- Probiotics - OMRI approved

*All non-grain additives are listed as allowable on the national list.*
